

1. Check the version of Python

In [13]:

```
!python --version
```

```
Python 3.8.8
```

We can see that the current version of Python3 is Python 3.8.8.

2. Associate command python to Python3(Mac)

1. Input command : "nano ./bash_profile"
2. Convert PATH python into python3 : "alias python=python3"

3. Initialize iterative prompt

```
python
```

4. Execute Python file in command prompt

```
python ~/execute.py
```
